

2017 PROSPECTIVE PRODUCT CONTENT LABEL¹

Standard Clean Plan covers 100% of your electricity usage, and is composed of 3% solar energy and 97% wind energy.

A percentage of this product's renewable content, listed below, is satisfied by renewable portfolio standard (RPS) state-mandated renewables that also meet Green-e Energy eligibility rules. 100% of the product's renewable electricity content is Green-e Energy certified.

In 2017, Standard Clean Plan will be made up of the following new renewable resources averaged annually. The proportion and generation location of the mandated renewables differs based on where the customer is located and the RPS rules in that state.

1. These figures reflect the renewables that we have contracted to provide. Actual figures may vary according to resource availability. We will annually report to you before August 1 of next year in the form of a Historic Product Content Label the actual resource mix of the electricity you purchased.

2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

For comparison, the current average mix of resources supplying the PJM system mix includes: Nuclear (34.70%), Coal (34.26%), Natural Gas (26.34%), Wind (2.23%), Hydroelectric (1.04%), Solid Waste (0.51%), and Other (0.92%). This resource mix was prepared in accordance with PJM Environmental Information Services.

The average home in the United States uses 901 kWh per month. [Source: U.S. EIA, 2015]
